i i <th>10-02-2019, 03:07 PM #543 My goal now is to fill in the cracks and dips. I poured some of the gloss medium into the dips, and tried to spread it out with a brush. That didn't work well. Then I got a bit of inspiration. I took my bottle of 'wet water' and lightly spritzed the top of the medum. That did seem to help it level out more. A couple more small pours, and I should have things pretty much level. Then I'll do some very translucent "water color" before I think about the Magic Water top coat. dave</th>	10-02-2019, 03:07 PM #543 My goal now is to fill in the cracks and dips. 	10-07-2019, 07:13 AM I decided to go back to structures and build a warehouse for the mill products. This should have been another brick building, but I was tired of brick and wanted to do a wood structure
deemery Senior Member Join Date: Sep 2007 Posts: 11493 Share	I go through a lot of 1/8 stock for bracing

This will be close to the tracks (no loading dock)

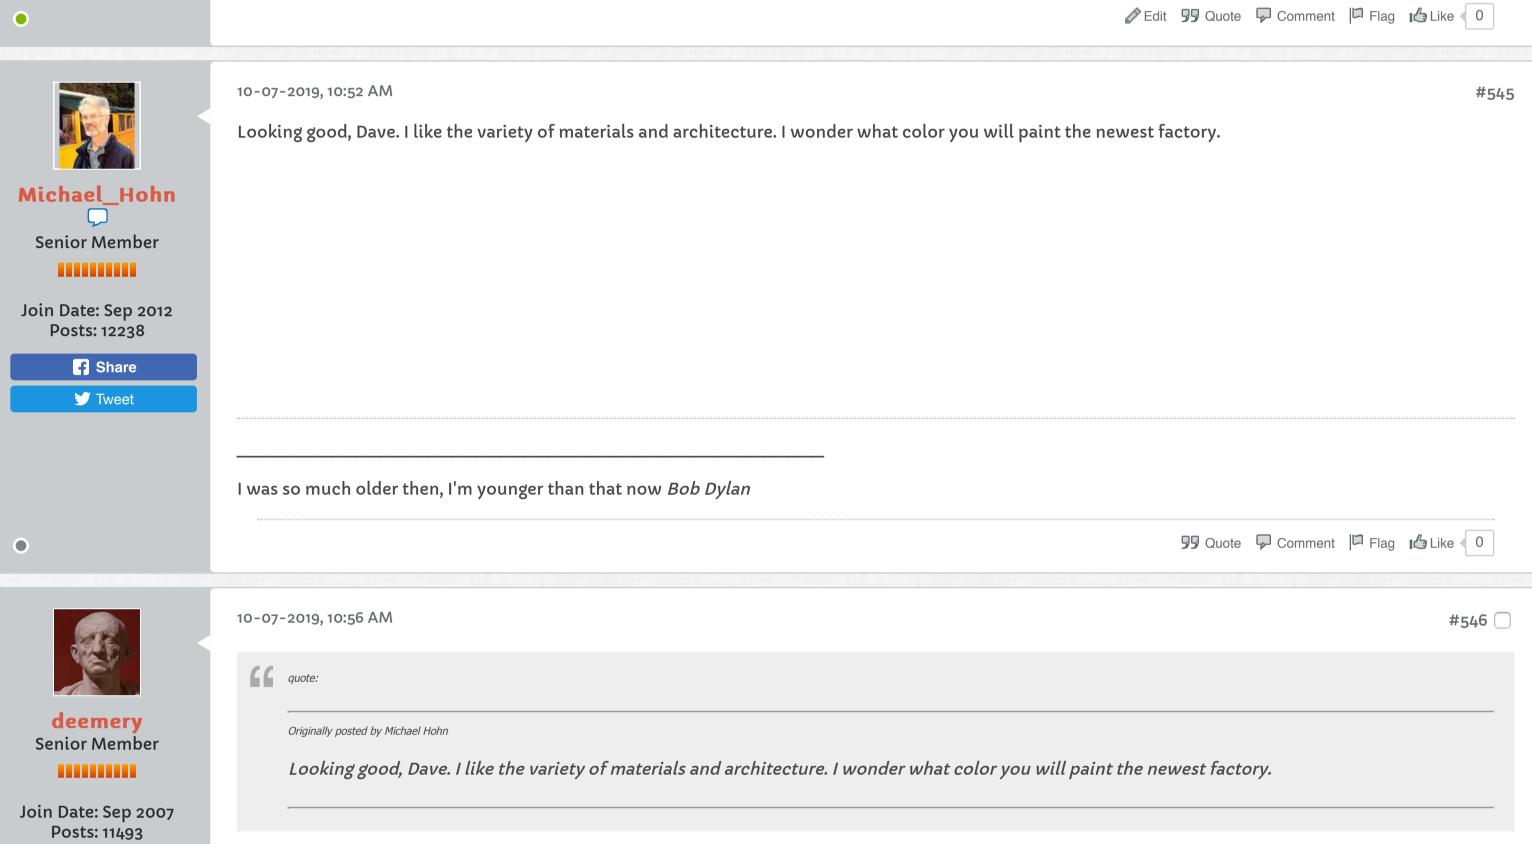

And a view "in context"

dave

Modeling 1890s (because the voices in my head told me to)

Share Tweet	Walls will be white, I think. Not sure what I'll paint the trim/windows. Mineral red/brown would probably be an historical color, but that won't get me much contrast with the brick mill. 🙂 dave

Action of the end of t	Not sure the cheap-ass Yankee mill owners would spring for the pigment in their lead paint, but that's an interesting idea! But after doing some more research, the linseed oil binder tended to produce a very light yellow/straw color rather than the stark white. Another possibility would be light grey (bone black mixed in with the white paint.) dave Modeling 1890s (because the voices in my head told me to)

<image/> <section-header></section-header>	10-07-2019, 12:41 PM #549 You want grey, look out the window! The more I think about this, the better I like the yellow idea. Your building reminds me of a couple of SRMW wooden mills, and some 1:1 ones I've seen in New England, all of which were that pale yellow straw color you describe. Have a Ball, and remember that Rule One governs! ☺ Pete in Michigan Image: Strate Str
	10-07-2019, 01:35 PM Dave great choice for going with the wood.
Image: Constant of the image: Cons	I love the clapboard siding look. Did you have a plan for the building or is this your own design?? Either way its going to fit perfectly.

<image/> <section-header><section-header><section-header><section-header></section-header></section-header></section-header></section-header>	10-07-2019, 01:53 PM#551Dave,I agree with Jerry. One more argument in favor of the pale yellow comes from the realization that this is a capital asset in which the "cheap-ass Yankee mill owners" have invested a considerable amount of money. Back in the day, a good-looking facility was the sign of competent management and a good place to do business, so the signage would have been properly punctuated and the mill, when new, at least, would have been painted an appropriate color, with the paint being mixed on-site by a Master Painter. The yellow, which would be enhanced by the interaction of the linseed oil and the pigment, would have been a logical choice. [^]It's a conceptPetein Michigan

One of my favorite Floquil colors was Antique White, which had a yellow cast to it, consistent with what your research shows regarding linseed oil. It also covered well. Something similar can probably be found in a craft acrylic. Mike

I went to a fascinating pair of talks in Amesbury, MA a couple weeks ago. The first speaker talked about the evolution of mill design, and the second talked about how they used the water power. Wooden mills (and presumably warehouses) were more common than we know, because most of them burned down. I probably should have gone with a wider window spacing, warehouses didn't need as much outside light as the mills did, but I think there's enough spacing, as well as the materiel difference, to make the warehouse look different from the mills. The building is 14" long, if anyone wants to know. I went back and measured it. :-) I went with a light straw color. If I don't like it, it's Pete's fault. I'll probably do the windows in a brighter white. (I prepped the windows tonight, cleaning them in a 10% solution of "Super Clean". I'm using a pair of metal double door castings, which I soaked in a vinegar and dishwasher solution first, to etch them a bit.) Lots going on this week/weekend (geology field trip to Vermont), so I might not make much more progress until next week. dave

Orionvp17Senior MemberOrion Date: Feb 2007Posts: 8839	10-07-2019, 03:47 PM #554 OK, if it's gonna be "Pete's fault," then Pete, being a very nice guy despite the publicity, should let you know that his favorite for this application is Ceramcoat "Old Parchment," which, not having been purchased recently, may have been given an entirely new name by now. Paint companies are like that they change names every few years so they have a "new" color [:-irked] It's a light yellow that looks, to my eye and light, anyway, pretty good on the building. White or very dark green trim will go well, too. YMMV. Content Pete in Michigan

<image/> <text><text><text><text><text></text></text></text></text></text>	10-08-2019, 03:36 AM #555 I like "Old Parchment" - it's a great drybrush highlight color. It's similar to the artist color "Titanium Buff." The one I used is a 'weathered white' that is a bit more yellow. Photos later, I want to make sure the paint is fully dry before I remove the weights (to keep it from warping). dave
